

## For iPhone Users

1. Open up Safari and load the website. [www.bvppa.org](http://www.bvppa.org)
2. At the bottom of the screen, you will see an icon depicting an arrow that looks like it is trying to get away from a square. This represents the never-ending struggle between the pursuant rectangular form and chased arrowhead. It also represents tapping a button to perform an action, which is more applicable in this case. So tap this button.
3. You will have a few options. The one you want to tap is “Add to Home Screen”.
4. Choose a name for the home screen icon. When you are done, it will show up on your home screen and you will never have to type the URL again!

## For Android and other systems Users

You have two ways of doing this

### Option 1:

1. Bookmark the page you want to add to a home screen
2. Go to the home screen you want to add the link to
3. long-press in an empty space to bring up the “Add to Home Screen” menu
4. select “Shortcuts”
5. select “Bookmark”
6. Choose your bookmark!

### Option 2:

1. Bookmark the page you want to add to a Home screen
2. Open the browser “bookmarks” screen
3. Long-press the bookmark you want
4. Select “Add to Home screen”

# ENJOY!
